

High Pressure Separators

Expro's High Pressure Separators are designed to meet the highest safety standards and operational efficiencies required in the pipeline industry. With separator sizes ranging from 30 MMCFD / 4,000 BFPD to 500 MMCFD / 40,000 BFPD, we have the right equipment to meet your separation needs.

Our separations allow you to stay on line during your pipeline pigging / cleaning operations. All of our High Pressure Separators are ASME / NACE coded, with 100% material traceability on all components included on the units. Our Separators are designed with 2, 3, and 4 phase separation abilities that allow us to meet your project needs.

We allow only the product you want back into your pipeline, while we safely remove all your cleaning chemicals, gels, liquids, solids and sludge's and send these unwanted products to temporary storage for disposal. So, allow us to help you minimize your loss of product, prevent pipeline shut-down time and lower your maintenance cost.

Applications for Expro's High Pressure Separators

- Separation during online pigging / cleaning operations
- Temporary separation to remove slugs of liquids that may have entered or has accumulated in your pipeline
- Temporary separation while your separation equipment is being repaired or replaced
- Temporary separation up stream of your compressor or filtering unit to prevent any unwanted liquids / solids from reaching a very violable section of your pipeline stream
