

## Trim and Bean Information for Model SCS Choke

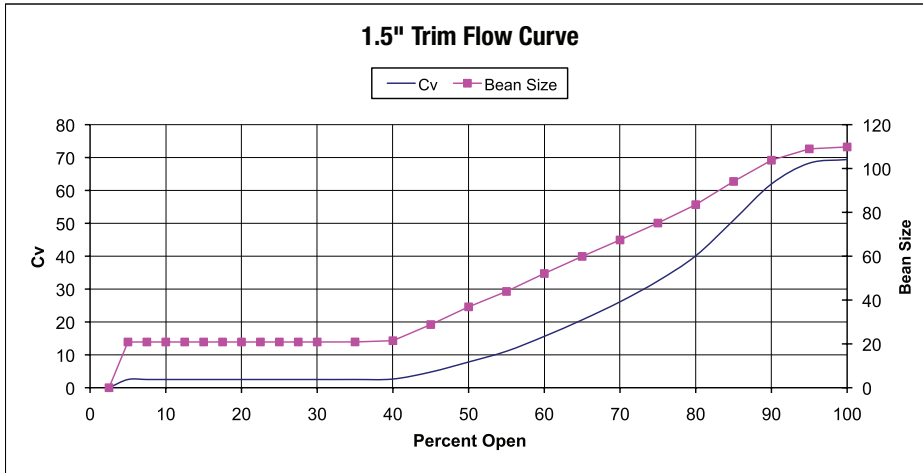

Adjustable SCS Choke Showing Available Trim Sizes

Positive SCS Choke Showing Bean Styles

## $C_v$ Information for Model SCS Choke

$C_v$  is the standard industry measurement used to compare the capacity and sizing of a choke for specific applications. The flow coefficient ( $C_v$ ) of a choke changes as the available flow area is increased or decreased, and reflects the efficiency at which the choke allows fluid to flow.
